Education

University of Houston

Graduation Date: December 2026

Bachelor of Science in Computer Science

Houston, Texas

- Coursework: Networking, Data Science, Data Structures and Algorithms, Databases, Object Oriented Programming

Experience

Derrick Corporation

March 2025 – Jan 2026

IT & Automation Intern | Power Automate, Dynamics, Docker, Python

Houston, Texas

- Architected 40+ workflows using Power Automate Solutions, implementing error handling and data validation to ensure 99% accuracy across \$20,000 of inventory.
- Deployed a 60TB Linux-based NAS in a RAID 5 array via Docker, managing containerized media backups and ensuring data redundancy for global organizational assets.
- Engineered an automated document generation pipeline to replace a legacy SaaS, implemented logic to dynamically populate Word templates from Dataverse, execute PDF conversions, and manage temporary file cleanup.

UH School of Nursing

August 2024 – February 2025

IT Student Assistant | Excel, BIOS, Active Directory

Katy, Texas

- Provided IT support for 130+ faculty/students, managing hardware/software troubleshooting and system transitions.

Lavner Education

May 2024 – August 2024

Computer Science Instructor

Houston, Texas

- Led classes of up to 25 students in High School C++, Python, Intro to AI, and Robotics.
- Taught 200+ students and effectively communicated to students with diverse technical backgrounds.

Coder Kids

August 2023 – August 2024

Computer Science Instructor Intern | C++, Lua, Python

Houston, Texas

- Conducted 150+ personalized lessons for students aged 8-16, focusing on enhancing their programming skills.
- Adapted teaching to accommodate varied learning paces, boosting students' confidence and problem-solving abilities.

Projects

TheGlowUp.dev | *Terraform, Golang, Azure, GitHub Actions, Docker*

[GitHub Link](#)

- Engineered a full-stack learning platform, utilizing Terraform to automate the provisioning of 6 Azure services and GitHub Actions with OIDC for secure, passwordless CI/CD deployments in under 60 seconds.
- Developed a Golang-based authentication system using JWT and custom middleware for RBAC, implementing HttpOnly and SameSite cookie policies to mitigate XSS and CSRF vulnerabilities.
- Architected a relational database schema normalized to BCNF to ensure data integrity; optimized frontend performance by implementing a global state management pattern with React Context API to reduce API overhead.

Hybrid Cloud & On-Prem Homelab | *Kubernetes, Ansible, ArgoCD, Linux, Prometheus, Grafana*

- Deployed a multi-node Kubernetes cluster on Proxmox using Ansible, implementing Longhorn distributed storage to ensure data persistence and seamless failover for stateful workloads.
- Deployed a robust monitoring framework using Ansible, configuring Prometheus to gather critical metrics via a Node Exporter and leveraging Grafana for real-time performance analysis and proactive issue resolution.
- Implemented ArgoCD to automate application lifecycles and cluster configuration via GitHub, ensuring a "Single Source of Truth" and eliminating manual configuration drift.

desktoDunks.site | *Terraform, Azure (Functions, CosmosDB), Python, GitHub Actions, React*

[GitHub Link](#)

- Launched a live production serverless analytics website currently serving 20+ monthly recurring users, featuring a state-driven Admin Dashboard for real-time data entry and game management.
- Architected and deployed a multi-service Azure environment using Terraform, managing serverless functions, Cosmos DB, and Static Web Apps via version-controlled HCL to ensure reproducible environments.
- Developed a Python-based API via Azure Functions with custom header-based authorization and managed secrets to secure NoSQL operations.

Skills & Certifications

Certifications: CompTIA Security+, Azure Fundamentals (AZ-900)

Languages: Python, Golang, SQL, C++, JavaScript, React.js, Node.js,

Infrastructure: Terraform, Ansible, Kubernetes, CI/CD, Docker, GitHub Actions, Git, Linux

Other: Azure, AWS, Prometheus, Grafana, NoSQL
